Construction continues on this bridge in Provo Canyon that will cross the river and provide access to Bridal Veil Falls Park.

Work progresses on Provo Canyon bridge

6 Dec 1990

A unique two-span bridge is under construction in Provo Canyon to provide a way across the Provo River and also access to Bridal Veil Falls Park and Numms Park.

Larry Buss, project engineer for the Utah Department of Transportation, said the 202-foot

span will carry two lanes of traffic in each direction.

The 90-foot wide bridge has a left turn lane for access into Bridal Veil Falls Park, plus an acceleration lane for traffic coming out of Bridal Veil eastbound to Heber City.

A second, south span provides

access into Numms Park, the historic area where the first long-distance transmission of power occurred.

The bridge is the largest in Provo Canyon being constructed as part of the long-range highway widening and improvement project. Built by Ralph L. Wads-

worth Construction Company, Salt Lake City, it is scheduled for completion next June.

Buss said a unique feature of the bridge is the retaining wall underneath, where concrete has been textured and colored with pigment to simulate surrounding limestone rock.
